I would like to thank everyone who has supported me during my DBA journey.

First and most importantly, I thank Marion for her love, continuous support, endurance, patience and her unshakeable belief that it will come to a happy end.

I thank my supervisors Professor Vic Dulewicz and Dr Richard McBain for their guidance and support during the DBA journey. Vic's constant encouragement, valuable feedback, motivation, endurance and his patience paired with his ability to challenge those parts that needed further attention were essential in helping me to write this thesis. Richard's rigour, valuable feedback, engagement and just being there, especially in critical situations, was important in helping me to reach what I set out to achieve.

Although I have not spent much time with Dr Paul Aitkin, I do have to thank him for his help and encouragement during the phase when I changed my topic.

I also thank Professor Arthur Money and Joe Hair for stimulating my interest in statistics, statistical techniques, PLS-SEM and facilitating my understanding of statistics and SPSS. Furthermore, I would like to thank them both for their encouragement to challenge existing and to develop new measurements instruments.

Thanks go to the Doctoral office to Veronica Clarke, Louise Hiller and Becky Kite for supporting and facilitating the process and helping me to cope with administrative challenges.

The study would not have been possible without the research participants. Therefore, special thanks go to Dr Patricia Bossons for her kind support in granting me access to the Henley Coaching Alumni network. Furthermore, I would like to thank Henley Alumni Germany, the Association for Professional Executive Coaching and Supervision and the Centre for Coaching in London who granted me access to their members and students.
